AMERICAN ASSOCIATION OF ENGINEERING SOCIETIES

The American Association of Engineering Societies (AAES) is a multidisciplinary organization dedicated to advancing the knowledge, understanding and practice of engineering in the public interest. Its members represent the mainstream of U.S. engineering—over half a million engineers in industry, government, and education.

Through its councils, commissions and committees, AAES addresses questions relating to the engineering profession, assesses public policy issues affecting engineering, technological innovation and national goals; conducts surveys of engineering personnel; represents the U.S. engineering community internationally in such bodies as the World Federation of Engineering Organizations and the Pan American Union of Engineering Associations; undertakes special projects such as national inventors' workshops and major studies of the utilization of American engineers; issues statistical studies of the engineering workforce, present and future; and publishes reference works such as *Who's Who in Engineering* and the *Thesaurus of Engineering and Scientific Terms.*

AAES also conducts forums for leaders in engineering, industry, government and education for the discussion of issues affecting engineering and the public interest. These include annual leadership conferences, workshops on technology forecasting and assessment, public policy roundtables, and engineering executive forums.

1988 Officers

Richard J. Gowen, Chairman, Board of Governors

Daniel de Simone, Executive Director

ENGINEERING MANPOWER COMMISSION

The Engineering Manpower Commission (EMC) has been a source of objective, timely data on questions relating to the supply and demand for technological personnel since its organization in 1950. As an AAES Commission, EMC is composed of volunteers from professional engineering societies, academia, government, and industry, supported by a professional staff headed by AAES' Director of Manpower Studies.

EMC conducts annual surveys of industry and schools of engineering, monitors trends in the supply of and demand for engineers, and produces annual reports on engineering enrollments, degrees, and salaries. In addition to its statistical studies, EMC also produces the *Engineering Manpower Bulletin,* which assesses trends in the engineering workforce including participation in the profession by women and ethnic minorities.

INTRODUCTION TO VOLUME I

This is the 19th annual report from the Engineering Manpower Commission (EMC) on enrollments in engineering and engineering technology in the United States. Volume I of the study covers engineering; Volume II covers engineering technology. All data are for enrollment as of Fall, 1986.

Volume I provides detailed data on enrollment in engineering programs for all students and for women, Blacks, Hispanics, Asian Americans, American Indians, and foreign nationals. Enrollment is tabulated by the year in school--first year, second year, etc.--for full-time undergraduates, and by the type of degree sought--master's, professional engineering, or doctorate--for full-time graduate students. Part-time students are tabulated separately at the undergraduate and graduate levels, irrespective of their year in school or of the type of advanced degree they are seeking. Note that this means that a lack of data for any particular type of full-time student does *not* mean that a school does not have such students. For example, Howard University in the District of Columbia happens to classify all of its doctoral candidates as part-time, because none are pursuing full-time classwork loads. Consequently, the entry under the full-time heading for doctoral students at Howard is empty; all of the Ph.D candidates at that institution have been reported by the school in the more general "Part-Time Graduate Study" category.

Two basic types of tabulations are provided, in addition to summary tables. The first summarizes overall enrollment, across all curricula, for each school covered in this report. Schools are listed alphabetically within states; state subtotals and grand totals are included. These data provide basic institutional and geographic measures of participation in engineering programs.

The second general type of tabulation provides detailed enrollment data for each engineering program offered by these schools. Programs are listed within some twenty broad engineering disciplines (e.g., chemical, civil, etc.); disciplinary subtotals are provided both within these listings and in separate summary tables. Within each broad discipline, programs are listed alphabetically by their detailed titles, within schools and states, thus preserving such distinctions as the differences between programs in general civil engineering, surveying engineering, and transportation engineering. Using these tables, readers can obtain information on enrollment in specialized fields of engineering that are not isolated in the broader disciplinary groups, such as manufacturing engineering.

NEW FEATURES OF THE REPORT

This report has been delayed in order to accomodate a conversion of EMC's educational surveys to new computer systems that support many refinements in these studies. These changes were made possible by grants from a number of corporations; we are grateful for their assistance and would like to thank them here. Contributors included Alcoa, Amoco, AT&T, Bechtel, duPont, Grumman, Kodak, and Rockwell International.

This is the first enrollment study produced with the new systems. It incorporates a number of changes, including:

--All tabulations draw on a master data base on engineering programs, in order to provide accurate, consistent descriptive data. This is the initial use of this data base for the enrollment study; we expect that there will be corrections and refinements as feedback is obtained from its use. Future enrollment surveys will use the data base to generate the survey forms used to obtain the statistics; this procedure has already been employed to conduct EMC's current study of the engineering degrees issued in 1986-87.

--A number of institutions have been added to the study, to make it as comprehensive as possible. This report covers 313 schools with engineering programs. In addition, other new programs have been identified which will begin to generate engineering enrollments in the 1987-88 academic year; these will be added to the reports to be issued later in 1988 for that period.

--Major efforts have been made to obtain full cooperation from participating institutions. In addition, when partial responses have been possible--for example, some schools cannot report the numbers of women who are enrolled in each specific combination of engineering program and year in school, but can report how many women are enrolled in each program, overall--then the overall data is pro-rated to generate reasonable approximations for data entry. As a result of these steps, the incidence of missing information has been reduced enough to justify the elimination of the estimates for missing data that were previously used in these reports. In addition, very detailed codes are employed to report the precise adjustments used to deal with every response (see the description of the "T-A-R" codes, below). Similar changes were reported for EMC's study of engineering and technology degrees in 1985-86.

The elimination of separate estimates for missing data means that EMC's figures for total engineering enrollment are slightly lower than they would have been if the previous methods had been retained. The estimates have been eliminated because they are now infrequently needed, and making them calls for heroic assumptions on our part. We do not believe that this change has had a significant impact on our time series data, depicted in the table on the following page. Compared to earlier years, the 1986 results are consistent with our expectations, showing a moderate decline, overall, of 3.8 percent. Enrollment of freshman engineering students dropped at virtually the same rate, at 3.9 percent. (Differences of a tenth of a percent or less should be regarded as within the standard range of error for these studies, even allowing for the fact that EMC attempts a total enumeration of the population of engineering students; uncertainties in the data base for part-time students and inconsistencies among the institutions in defining just what is or is not an engineering program could easily account for swings of this magnitude in the results.) The decline in Fall, 1986 freshman engineering enrollments is probably attributable to some reductions in interest in engineering careers, compared to the all-time highs in interest in engineering that were displayed by freshmen just a few years earlier.

Further changes are scheduled for future reports. During 1988, we will substantially reduce the time required to obtain and report these data. Our reports on degrees in 1986-87 are scheduled to be released by late Spring of 1988; reports on enrollment in Fall, 1987 are to be released during the summer of 1988; reports on degrees in 1987-88 will be released early in 1989; reports on enrollment in Fall, 1988 will be released by the Spring of 1989. During 1988, we also will begin to make these data available in machine-readable form on standard PC-format 360K floppy disks, beginning with information on the 1986-87 academic year. Further down the road, we expect to provide improved forms of output, including added tabulations, in these reports.

These refinements are being guided by the Commission's Education Committee, which has organized an examination of every aspect of these studies. Discussions have begun of many substantive questions that arise in surveys of engineering education: for example, how should programs that cut across traditional disciplinary lines in the field of engineering be handled? How should the Commission deal with pre-engineering curricula in 3/2 programs at junior colleges and other non-engineering schools around the nation? How should we resolve the problems that are raised by inconsistencies from one institution to the next in the definitions of part-time students (for example, see the case of Howard University, noted above), and in the varying capabilities of schools to report data on these students? These and many other matters are being examined by EMC. The Commission welcomes any advice and counsel that it may be able to obtain on such questions from the users of these reports.

More detailed commentary on these data will be issued simultaneously with these reports in issue No. 87 of EMC's *Engineering Manpower Bulletin*. Any questions regarding the course content or other details of specific engineering or engineering technology programs should be directed to the participating schools. Other inquiries about EMC's educational surveys are welcome. Contact R. A. Ellis, Director of Manpower Studies, American Association of Engineering Societies. For prices and ordering information, see the inside back cover.

COVERAGE AND RESPONSE

In engineering, the 1986 enrollment study covers 313 institutions, including all of those with curricula approved by the Accreditation Board for Engineering and Technology (ABET). Some of these programs are newly initiated and have not been included in previous reports from EMC. These listings provide a comprehensive enumeration of enrollment in engineering programs available in the United States today (a few very new programs are not included as they had not actually gotten underway by the Fall of 1986; the programs of the National Technological Uni-

TEN YEAR SUMMARY OF FALL ENGINEERING ENROLLMENTS, 1977-

	1977	1978	1979	1980	1981	1982	1983
FULL TIME UNDERGRADUATES:							
First Year	88,780	95,805	103,724	110,149	115,280	115,303	109,63
Second Year	70,326	72,150	78,594	84,982	87,519	89,785	89,51

Part Time Graduate Students	25,065	24,133	25,768	28,250	29,818	31,589	33,674
Number of Schools	289	276	286	287	286	286	292
ABET-accredited Schools	N/A	N/A	239	246	250	249	25

versity at Fort Collins are not included because that institution, which operates through satellite broadcasts, cannot enumerate enrollment in degree-granting curricula).

In these counts of institutions, EMC abides by local preferences in deciding whether or not to count a school's branches as separate entities. Thus all of the various locations of the Pennsylvania State University are counted as a single institution, while in other cases (for example, Purdue and the University of Texas), different branches are treated as separate schools. This treatment is a continuation of EMC's traditional practices.

In engineering technology, the 1986 degree survey includes data from 257 schools, including all but seven of the institutions with ABET-accredited programs. This is a substantial increase, compared to previous EMC enrollment studies (200 schools were covered in the Commission's reports on 1985 enrollment). The decision to strive for a comprehensive treatment of all schools with ABET-accredited technology programs is a change from past EMC practices and is intended to improve the stability and comparability of the year-to-year statistics gathered by these studies. As in the past, the technology data also includes some schools without ABET-approved programs at that level; however, many of those institutions do have ABET-approved engineering programs.

In all, well over 500 institutions of higher education are covered by the 1986 survey.

As in the past, data for some institutions was obtained by substituting a 1985 response for missing 1986 data. Substitutions are permitted because problems caused principally by personnel turnover make it unreasonable to expect complete participation every year by every school. Substitutions are permitted only when a valid response has been provided for the previous year's data. In some cases, substituted data applies only to a portion of the institution's response; for example, undergraduate data may be covered with a fresh 1986 response, while graduate programs have been handled with 1985 data. All substitutions are identified in the report by appropriate "T-A-R" codes (see below). The extent of substitution is being reduced by EMC's ongoing efforts to work for a comprehensive response to each of its surveys.

ERROR CHECKING

Thorough efforts were made to eliminate errors in these statistics. Literal comparisons between original data and key entries were carried out. Totals for every combination of enrollment level and school were checked against original questionnaires. Results for each school were compared with reports for previous years, to check for questionable shifts in the results from one year to the next, or missing information on particular programs. Instances of both sorts of problems were found and fixed; in some cases, reporting errors on the part of participating institutions were identified, while in others some significant shifts in patterns of engineering enrollment were confirmed.

All program-level ABET accreditation codes were doublechecked for this study. In addition, all institutional-level type and accreditation codes used by EMC were doublechecked, confirming questionable assignments by using the 20th edition of *The College Blue Book* (New York: Macmillan, 1985). A similar review was done for the initial use of EMC's new data base on engineering programs, for the survey of degrees issued during 1985-86. This second round of checking corrected some errors in the data. Use of the laser-printed survey forms for these studies, which provide direct feedback on these codes to the participating institutions, should allow further refinements and improvements in the accuracy of this descriptive data. In some cases, applicants for pending regional accreditation (as listed in the *Blue Book*) have been updated to reflect subsequent conferral of full accreditation, by direct checking with the institutions. Type codes were also revised in a number of cases, most frequently for institutions with a current and firm association with a religious denomination.

EXPLANATION OF SYMBOLS AND ABBREVIATIONS

The "T-A-R" Codes:

In place of a numerical coding scheme previously used by EMC, the 1986 enrollment survey uses a three-position alphabetical coding system to denote school types, institutional-level accreditation, and (if applicable) special conditions that explain a school's response to the survey. These codes are constructed as follows:

T: Type of School:

--"S" means state or other public control, including municipally-sponsored schools, but excluding the federally-sponsored service academies.

--"F" denotes the federally-sponsored schools.

--"N" means non-sectarian, non-profit private institutions.

--"R" denotes religiously affiliated private institutions.

--"P" denotes proprietary schools.

A: Accreditation:

--"E" means at least one *engineering* program is accredited by ABET.

--"T" means that at least one *technology* program is accredited by ABET.

--"B" means that the school has ABET-approved courses in *both* engineering and technology.

--"R" means the school does not have ABET-accredited courses but is approved at the institutional level by recognized regional accreditation agencies such as the Southern Association of Colleges and Schools.

--"X" means none of the preceding codes apply.

R: Response:

These codes appear only when applicable; they are *not* necessarily identical to the similar codes used in the survey of 1986 degrees. Codes are listed here in alphabetical order; however, they were assigned as needed, not necessarily in alphabetic order, so the ordering is not significant. EMC is still experimenting with the best scheme for these response codes, and a more consistent system will probably not emerge until 1989.

--"A" means all details (women, minorities, and foreign nationals enrolled in engineering programs) are missing from the response. There may be such students at the school but they will not show up in the tabulations for the specific population groups. The numbers for all enrolled students are not affected.

--"B" is similar to "A" in that all information on the detailed groups was missing; in addition, data did not separate part-time from full-time students.

--"C" means that all details were missing except information on foreign nationals.

--"D" denotes responses where data on the minority groups was missing; also, data for the other special population groups included part-time students, which were pro-rated out by EMC.

--"E" means that all data for the special population groups combined part-time and full-time enrollments; the data for total enrollment in each program were used to pro-rate the numbers.

--"F" means that data on foreign nationals were not provided; all other population groups were reported.

--"G" means that no data were provided for women or minorities, and that part-time enrollment had to be pro-rated out, using information on the institution as a whole.

--"H" means no data were provided for women, and only total enrollment figures (which were pro-rated) were available for each program on minorities and foreign nationals.

--"I" is a case where only totals by program and population groups were available; these were pro-rated to class levels and part-time/full-time details, using prior responses as the basis for the allocation.

--"J" denotes a situation similar to "I," above, except that the pro-rating was done on the basis of data provided directly by the institution.

--"K" means that part-time students were not reported at all, although the school does have them.

--"L" was not used; neither was "O."

--"M" means data were missing for women; all other details were supplied.

--"N" means part-time students were not separated from full-time students in the data supplied for the special population groups; this was corrected by pro-rating those data on the basis of the statistics supplied for overall enrollments.

--"P" denotes responses where all details on Hispanics, Asians, and American Indians were missing.

--"Q" is similar to "N," above, in that that data supplied for minorities and foreign nationals did not separate part-time and full-time students. Overall data and data for women were okay.

--"R" denotes cases where special population data were missing for Hispanics, Asians, American Indians, and foreign nationals; data on women and Black students were okay.

--"S" denotes substituted data from EMC's 1985 enrollment survey; in a few cases such schools also have missing details.

--"T" means data were missing for women and Hispanics; data were supplied for the other groups.

--"U" means no minority data were provided, and only totals were available for women and/or foreign nationals; totals were pro-rated to generate entries for specific programs and enrollment groups.

--"V" means that total counts were the only data provided for all of the special population groups; these were then pro-rated.

--"W" means that no data were supplied for Asians or foreign nationals; data were okay for other groups.

--"X" denotes a situation where part- and full-time students were combined in responses for students in particular years in school; however, separate full-time and part-time totals were supplied. Also, the distribution of special population groups across class levels was supplied only for Black students. The problem was resolved by pro-rating the "all student" data to separate out full-time and part-time students at each class level, and by also pro-rating all special populations (other than Black students) according to the overall distribution of students in each program.

--"Y" means all data for special population groups were missing except for details on women.

--"Z" means data on women students were supplied, but only totals were available for the minority groups and the foreign nationals.

Examples: "TAR" code of SB: this is a publicly supported school with ABET-approved programs in both engineering and engineering technology. "TAR" code of RRS: this is a religious-affiliated school, regionally accredited, which has been handled with a substituted 1985 response. "TAR" code of NEY: this is a private, non-sectarian school with ABET-accredited engineering programs and missing details for minorities and foreign nationals.

Program-Level Accreditation Codes:

These are used only in the tabulations for specific curricula:

--"B" denotes ABET accreditation for the program at the bachelor's level.

--"M" denotes ABET accreditation at the master's level (now only rarely used for programs with no B.S. equivalent).

--"A" denotes ABET accreditation at the associate degree level.

--"N" denotes programs with no ABET accreditation. In general, where program titles match across degree levels, higher-level offerings will be flagged with the corresponding lower-level code if such an ABET certification exists. However, many situations exist where this rule cannot be unambiguously applied. For example, we have generally labeled master's level programs in engineering mechanics as "N" for "no ABET accreditation" even when an ABET-approved BS curriculum in mechanical engineering is offered. If an undergraduate program in engineering mechanics as such existed, then a "B" code would have been used for any corresponding higher-level program. In general, ABET does not attempt to accredit graduate programs, and codes at this level (other than the rare "M" designations) are meant only to denote the existence in an institution of an ABET-approved undergraduate course with an identical designation. This approach has been used for years in EMC educational surveys; however, it is possible that it will be changed as a result of the ongoing review of these projects described above.

Engineering Discipline Category Abbreviations:

AER = Aerospace and Related
AGR = Agricultural
ARC = Architectural
BIO = Bioengineering
CER = Ceramics
CHE = Chemical
CVL = Civil and Construction
CMP = Computer
ELC = Electrical and Electronic
ENS = Engineering Science
ENV = Environmental
GNL = General Engineering
INM = Industrial/Manufacturing/Engineering Management
MAR = Marine
MTL = Materials and Metallurgical
MEC = Mechanical
MGN = Mining/Mineral/Geological
NUC = Nuclear
PET = Petroleum and Natural Gas
SYS = Systems
OTH = Others
PRE = Undeclared majors or other "freshman engineering" students

MISCELLANEOUS NOTES

All pre-engineering and "3-2" curricula in community or junior colleges are treated as technology courses. The Commission is questioning this practice and is likely to revise it. EMC covers only a small fraction of these courses in its surveys; it is possible that pre-engineering will be dropped altogether, because to track it accurately would require the Commission to add hundreds of schools to its studies.

The following institutional name changes are reflected in the 1986 survey: University of Santa Clara to Santa Clara University; Southern Technical Institute to Southern College of Technology; Northeastern Oklahoma State University to Northeastern State University. The name of the Capitol Institute of Technology has *not* been changed in this report to Capitol College because that shift was not effective until the 1987-88 academic year.

The new engineering program at Alfred University is listed separately from the data for the SUNY College of Ceramics at Alfred University. Other engineering schools new to these enrollment studies include FAMU/FSU in Florida; Morgan State University in Maryland; St. Ambrose College in Iowa; Mankato State University in Minnesota; the SUNY A&T College at Farmingdale, New York; Central State University in Ohio; Northeastern State University and Oral Roberts University in Oklahoma; the University of Texas at San Antonio; and George Mason University in Virginia. At the request of the institution, reports for the Columbia and Kansas City campuses of the University of Missouri have been separated (in the past, the school indicated that it wished to submit a single combined report). The University of Tennessee's Space Institute is also treated separately.

There is no listing for the University of Texas' Permian Basin campus, which has a single small program in control engineering. This is the only engineering institution where EMC tried but failed to achieve coverage. The effect of the omitted data is trivial (the school reported only 17 full-time students in its last response for the Fall of 1984). Since this is the only missing school, the list of engineering institutions not covered by the study that was included in these introductions in earlier EMC enrollment reports is not needed in this one. Also, the similar listing of schools for which data was obtained by using a substituted 1985 response has been eliminated, since "T-A-R" codes provide this information at both the institutional and the program levels.

RECENT AND UPCOMING ENGINEERING MANPOWER COMMISSION PUBLICATIONS

ENGINEERS' SALARIES: SPECIAL INDUSTRY REPORT 1987

A detailed breakdown of engineering salaries according to type of industry, geographic regions, company size, employee experience, highest degree held, and supervisory status. Tables and graphs depict salaries in medians, quartiles, deciles and means.

member price: $140.00 non-member price: $230.00

PROFESSIONAL INCOME OF ENGINEERS 1987

An abridged version of the *Special Industry Report*. Details for salary differences by highest degree held are not included; tabulations are added on engineering compensation in local, state and federal government agencies.

member price: $47.50 non-member price: $77.50

SALARIES OF ENGINEERS IN EDUCATION 1986

Median, quartile, decile and mean salaries across 18 experience brackets for engineering faculty, by academic rank, contract types, and type of institution.

member price: $50.00 non-member price: $80.00

ENGINEERING AND TECHNOLOGY ENROLLMENTS, FALL 1986

A two-volume overview of the enrollment of students in engineering and engineering technology programs throughout the United States. Details by fields of study for specific schools and states, with added tabulations for women, minorities, and foreign nationals.

Complete set: member price: $120.00 non-member price: $195.00

Separate volumes:

Part I: Engineering Enrollments: member price: $70.00 non-member price: $115.00

Part II: Technology Enrollments: member price: $70.00 non-member price: $115.00

ENGINEERING AND TECHNOLOGY DEGREES, 1986

A comprehensive report on recent engineering and engineering technology degrees in three volumes. Part I provides general statistics for schools and states on degrees in 40 engineering and technology disciplines. Part II provides similar data for awards to women, minorities, and foreign nationals. Part III includes detailed data for specific curricula.

Complete Set: member price: $140.00 non-member price: $230.00

Separate volumes:

Part I: by School: member price: $55.00 non-member price: $89.00

Part II: Minorities: member price: $75.00 non-member price: $115.00

Part III: by Curriculum: member price: $55.00 non-member price: $89.00

ENGINEERING MANPOWER BULLETINS

Concise, timely information on trends in engineering salaries, enrollments, degrees, women and minorities in engineering, other topics.

Full subscription year: member price: $47.00 non-member price: $75.00

Single copies: member price: $9.00 non-member price: $12.00

TO ORDER: Member prices are available to members of AAES member societies, employees of Industry Affiliates, and firms/educational institutions that have participated in the study to be purchased. Please include society affiliation and membership number, Industry Affiliate, or survey participant information with your order, if applicable. First class postage (U.S. domestic) is included in the purchase price. Foreign orders add 10%; check must be payable in U.S. funds. Prepayment required; pro forma invoices provided on request. Orders should be directed to the AAES Publications Department, 415 Second St. NE, Washington, D.C. 20002.

AMERICAN ASSOCIATION OF ENGINEERING SOCIETIES

The American Association of Engineering Societies (AAES) is a multidisciplinary organization dedicated to advancing the knowledge, understanding and practice of engineering in the public interest. Its members represent the mainstream of U.S. engineering—over half a million engineers in industry, government, and education.

Through its councils, commissions and committees, AAES addresses questions relating to the engineering profession; assesses public policy issues affecting engineering, technological innovation and national goals; conducts surveys of engineering personnel; represents the U.S. engineering community internationally in such bodies as the World Federation of Engineering Organizations and the Pan American Union of Engineering Associations; undertakes special projects such as national inventors' workshops and major studies of the utilization of American engineers; issues statistical studies of the engineering workforce, present and future; and publishes reference works such as *Who's Who in Engineering* and the *Thesaurus of Engineering and Scientific Terms.*

AAES also conducts forums for leaders in engineering, industry, government and education for the discussion of issues affecting engineering and the public interest. These include annual leadership conferences, workshops on technology forecasting and assessment, public policy roundtables, and engineering executive forums.

1988 Officers

Richard J. Gowen, Chairman, Board of Governors
George Kotnick, Chairman-Elect
Richard W. Karn, Past Chairman
Harold S. Kemp, Secretary/Treasurer
Daniel de Simone, Executive Director

ENGINEERING MANPOWER COMMISSION

The Engineering Manpower Commission (EMC) has been a source of objective, timely data on questions relating to the supply and demand for technological personnel since its organization in 1950. As an AAES Commission, EMC is composed of volunteers from professional engineering societies, academia, government, and industry, supported by a professional staff headed by AAES' Director of Manpower Studies.

EMC conducts annual surveys of industry and schools of engineering, monitors trends in the supply of and demand for engineers, and produces annual reports on engineering enrollments, degrees, and salaries. In addition to its statistical studies, EMC also produces the *Engineering Manpower Bulletin,* which assesses trends in the engineering workforce including participation in the profession by women and ethnic minorities.

Combined Summaries 273

INTRODUCTION TO VOLUME II

This is the 19th annual report from the Engineering Manpower Commission (EMC) on enrollments in engineering and engineering technology in the United States. Volume I of the study covers engineering; Volume II covers engineering technology. All data are for enrollment as of Fall, 1986.

Volume II provides detailed data on enrollment in engineering technology programs for all students and for women, Blacks, Hispanics, Asian Americans, and American Indians. (A sixth group, foreign nationals, are also tracked in EMC's surveys of engineering enrollments, but are not treated in reports on engineering technology.) Enrollment is tabulated by the year in school--first year, second year, etc.--for all full-time students; in addition, the tables for bachelor of technology curricula include data on enrollment of post-baccalaureate students. Part-time students are tabulated separately, irrespective of their year in school.

Separate tabulations are provided for programs at the associate and the bachelor's level. Schools that offer both kinds of programs do not adhere to a uniform set of conventions in classifying their students; some invariably treat all first-year and second-year students as associate degree candidates, and all third-year or higher-level students as bachelor degree candidates. In such cases there will be no first or second year enrollments reported for the bachelor's programs. Other schools may report first and second year students in both types of programs.

Two basic types of tabulations are provided, in addition to summary tables. The first summarizes overall enrollment, across all curricula, for each school covered in this report. Schools are listed alphabetically within states; state subtotals and grand totals are included. These data provide basic institutional and geographic measures of participation in engineering technology programs.

The second general type of tabulation provides detailed enrollment data for each technology program offered by these schools. Programs are listed within some twenty broad disciplinary groups (e.g., chemical, civil, etc.); subtotals are provided both within these listings and in separate summary tables. Within each broad discipline, programs are listed alphabetically by their detailed titles, within schools and states, thus preserving distinctions such as the difference between programs in civil engineering technology and those in surveying engineering technology.

NEW FEATURES OF THE REPORT

This report has been delayed in order to accomodate a conversion of EMC's educational surveys to new computer systems that support many refinements in these reports. These changes were made possible by grants from a number of corporations; we are grateful for their assistance and would like to thank them here. Contributors included Alcoa, Amoco, AT&T, Bechtel, duPont, Grumman, Kodak, and Rockwell International.

This is the first enrollment study produced with the new systems. It incorporates a number of changes, including:

--All tabulations draw on a master data base on engineering programs, in order to provide accurate, consistent descriptive data. This is the initial use of this data base for the enrollment study; we expect that there will be corrections and refinements as feedback is obtained from its use. Future enrollment surveys will use the data base to generate the survey forms used to obtain the statistics; this procedure has already been employed to conduct EMC's current study of the engineering and technology degrees issued in 1986-87.

--A number of institutions have been added to the study, to make it as comprehensive as possible. This report covers 257 schools with engineering technology programs. In contrast, the 1985 technology enrollment report covered 200 schools.

--Major efforts have been made to obtain full cooperation from participating institutions. In addition, when partial responses have been possible--for example, some schools cannot report the numbers of women who are enrolled in each specific combination of engineering program and year in school, but can report how many women are enrolled in each program, overall--then the overall data is pro-rated to generate reasonable approximations for data entry. As a result of these steps, the incidence of missing information has been reduced enough to justify the elimination of the estimates for missing data that were previously used in these reports. In addition, very detailed codes are employed to report the precise adjustments used to deal with every response (see the description of the "T-A-R" codes, below). Similar changes were reported for EMC's study of engineering and technology degrees in 1985-86.

The elimination of separate estimates for missing data means that EMC's figures for total engineering enrollment are slightly lower than they would have been if the previous methods had been retained. The estimates have been eliminated because they are now infrequently needed, and making them calls for heroic assumptions on our part. This change does not affect the technology data, for EMC did not make missing data estimates for those programs; the Commission has never attempted to provide comprehensive coverage of all engineering technology programs, in part because unaccredited courses are offered at hundreds of community and junior colleges not ordinarily covered in EMC's surveys. Another problem has been a degree of inconsistency from one school to the next, or even from one year to the next in the same school, in deciding just what should or should not be reported as a bona fide engineering technology program. In order to improve the consistency of the technology time series data, EMC has opted to concentrate on coverage of schools with ABET-approved courses (see comments on coverage and response, below). The table on the next page provides EMC data for technology enrollments for 1980-1986.

Further changes are scheduled for future reports. During 1988, we will substantially reduce the time required to obtain and report these data. Our reports on degrees in 1986-87 are scheduled to be released by late Spring of 1988; reports on enrollment in Fall, 1987 are to be released during the summer of 1988; reports on degrees in 1987-88 will be released early in 1989; reports on enrollment in Fall, 1988 will be released by the Spring of 1989. During 1988, we also will begin to make these data available in machine-readable form on standard PC-format 360K floppy disks, beginning with information on the 1986-87 academic year. Further down the road, we expect to provide improved forms of output, including added tabulations, in these reports.

These refinements are being guided by the Commission's Education Committee, which has organized an examination of every aspect of these studies. Discussions have begun of many substantive questions that arise in surveys of engineering education: for example, how should programs that cut across traditional disciplinary lines in the field of engineering be handled? How should the Commission deal with pre-engineering curricula in 3/2 programs at junior colleges and other non-engineering schools around the nation? How should we resolve the problems that are raised by inconsistencies from one institution to the next in the definitions of part-time students, and in the varying capabilities of schools to report data on these students? These and many other matters are being examined by EMC. The Commission welcomes any advice and counsel that it may be able to obtain on such questions from the users of these reports.

More detailed commentary on these data will be issued simultaneously with these reports in issue No. 87 of EMC's *Engineering Manpower Bulletin*. Any questions regarding the course content or other details of specific engineering or engineering technology programs should be directed to the participating schools. Other inquiries about EMC's educational surveys are welcome. Contact R. A. Ellis, Director of Manpower Studies, American Association of Engineering Societies. For prices and ordering information, see the inside back cover.

COVERAGE AND RESPONSE

In engineering, the 1986 enrollment study covers 313 institutions, including all of those with curricula approved by the Accreditation Board for Engineering and Technology (ABET). Some of these programs are newly initiated and have not been included in previous reports from EMC. These listings provide a comprehensive enumeration of enrollment in engineering programs available in the United States today.

As noted above, in engineering technology the 1986 degree survey includes data from 257 schools, including all but seven of those with ABET-approved programs. The decision to strive for a comprehensive treatment of all

Number of Schools Surveyed With At Least One ABET-Approved Program	166	161	154	161	161	157	185

schools with ABET-accredited technology programs is a change from past EMC practices and is intended to improve the stability and comparability of the year-to-year statistics gathered by these studies. As in the past, the technology data also include some schools without ABET-approved programs at that level; however, many of those institutions do have ABET-approved engineering programs.

In all, well over 500 institutions of higher education are covered by the 1986 survey.

In these counts of institutions, EMC abides by local preferences in deciding whether or not to count a school's branches as separate entities. Thus all of the various locations of the Pennsylvania State University are counted as a single institution, while in other cases different branches are treated as separate schools.

As in the past, data for some institutions was obtained by substituting a 1985 response for missing 1986 data. Substitutions are permitted because problems caused principally by personnel turnover make it unreasonable to expect complete participation every year by every school. Substitutions are permitted only when a valid response has been provided for the previous year's data. In some cases, substituted data applies only to a portion of the institution's response; for example, undergraduate data may be covered with a fresh 1986 response, while graduate programs have been handled with 1985 data. All substitutions are identified in the report by appropriate "T-A-R" codes (see below). The extent of substitution is being reduced by EMC's ongoing efforts to work for a comprehensive response to each of its surveys.

ERROR CHECKING

Thorough efforts were made to eliminate errors in these statistics. Literal comparisons between original data and key entries were carried out. Totals for every combination of enrollment level and school were checked against original questionnaires. Results for each school were compared with reports for previous years, to check for questionable shifts in the results from one year to the next, or missing information on particular programs. Instances of both sorts of problems were found and fixed; in some cases, reporting errors on the part of participating institutions were identified, while in others some significant shifts in patterns of engineering enrollment were confirmed.

All program-level ABET accreditation codes were doublechecked for this study. In addition, all institutional-level type and accreditation codes used by EMC were doublechecked, confirming questionable assignments by using the 20th edition of *The College Blue Book* (New York: Macmillan, 1985). A similar review was done for the initial use of EMC's new data base on engineering programs, for the survey of degrees issued during 1985-86. This second round of checking corrected some errors in the data. Use of the laser-printed survey forms for these studies, which provide direct feedback on these codes to the participating institutions, should allow further refinements and improvements in the accuracy of this descriptive data. In some cases, applicants for pending regional accreditation (as listed in the *Blue Book*) have been updated to reflect subsequent conferral of full accreditation, by direct checking with the institutions. Type codes were also revised in a number of cases, most frequently for institutions with a current and firm association with a religious denomination.

EXPLANATION OF SYMBOLS AND ABBREVIATIONS

The "T-A-R" Codes:

In place of a numerical coding scheme previously used by EMC, the 1986 enrollment survey uses a three-position alphabetical coding system to denote school types, institutional-level accreditation, and (if applicable) special conditions that explain a school's response to the survey.

T: Type of School:

--"S" means state or other public control, including municipally-sponsored schools, but excluding the federally-sponsored service academies.

--"F" denotes the federally-sponsored schools.

--"N" means non-sectarian, non-profit private institutions.

--"R" denotes religiously affiliated private institutions.

--"P" denotes proprietary schools.

A: Accreditation:

--"E" means at least one *engineering* program is accredited by ABET.

--"T" means that at least one *technology* program is accredited by ABET.

--"B" means that the school has ABET-approved courses in *both* engineering and technology.

--"R" means the school does not have ABET-accredited courses but is approved at the institutional level by recognized regional accreditation agencies such as the Southern Association of Colleges and Schools.

--"X" means none of the preceding codes apply.

R: Response:

These codes appear only when applicable; they are *not* necessarily identical to the similar codes used in the survey of 1986 degrees. Codes are listed here in alphabetical order; however, they were assigned as needed, not necessarily in alphabetic order, so the ordering is not significant. A single set of codes was used for both engineering and engineering technology; however, the technology tables make no use of any of the codes which deal specifically with foreign nationals. EMC is still experimenting to determine the best scheme for these codes, and a more consistent system will probably not emerge until 1989.

--"A" means all details (women, minorities, and foreign nationals enrolled in engineering programs) are missing from the response. There may be such students at the school but they will not show up in the tabulations for the specific population groups. The numbers for all enrolled students are not affected.

--"B" is similar to "A" in that all information on the detailed groups was missing; in addition, data did not separate part-time from full-time students.

--"C" means that all details were missing except information on foreign nationals.

--"D" denotes responses where data on the minority groups was missing; also, data for the other special population groups included part-time students, which were pro-rated out by EMC.

--"E" means that all data for the special population groups combined part-time and full-time enrollments; the data for total enrollment in each program were used to pro-rate the numbers.

--"F" means that data on foreign nationals were not provided; all other population groups were reported.

--"G" means that no data were provided for women or minorities, and that part-time enrollment had to be pro-rated out, using information on the institution as a whole.

--"H" means no data were provided for women, and only total enrollment figures (which were pro-rated) were available for each program on minorities and foreign nationals.

--"I" is a case where only totals by program and population groups were available; these were pro-rated to class levels and part-time/full-time details, using prior responses as the basis for the allocation.

--"J" denotes a situation similar to "I," above, except that the pro-rating was done on the basis of data provided directly by the institution.

--"K" means that part-time students were not reported at all, although the school does have them.

--"L" was not used; neither was "O."

--"M" means data were missing for women; all other details were supplied.

--"N" means part-time students were not separated from full-time students in the data supplied for the special population groups; this was corrected by pro-rating those data on the basis of the statistics supplied for overall enrollments.

--"P" denotes responses where all details on Hispanics, Asians, and American Indians were missing.

--"Q" is similar to "N," above, in that that data supplied for minorities and foreign nationals did not separate part-time and full-time students. Overall data and data for women were okay.

--"R" denotes cases where special population data were missing for Hispanics, Asians, American Indians, and foreign nationals; data on women and Black students were okay.

--"S" denotes substituted data from EMC's 1985 enrollment survey; in a few cases such schools also have missing details.

--"T" means data were missing for women and Hispanics; data were supplied for the other groups.

--"U" means no minority data were provided, and only totals were available for women and/or foreign nationals; totals were pro-rated to generate entries for specific programs and enrollment groups.

--"V" means that total counts were the only data provided for all of the special population groups; these were then pro-rated.

--"W" means that no data were supplied for Asians or foreign nationals; data were okay for other groups.

--"X" denotes a situation where part- and full-time students were combined in responses for students in particular years in school; however, separate full-time and part-time totals were supplied. Also, the distribution of special population groups across class levels was supplied only for Black students. The problem was resolved by pro-rating the "all student" data to separate out full-time and part-time students at each class level, and by also pro-rating all special populations (other than Black students) according to the overall distribution of students in each program.

--"Y" means all data for special population groups were missing except for details on women.

--"Z" means data on women students were supplied, but only totals were available for the minority groups and the foreign nationals.

Examples: "TAR" code of SB: this is a publicly supported school with ABET-approved programs in both engineering and engineering technology. "TAR" code of RRS: this is a religious-affiliated school, regionally accredited, which has been handled with a substituted 1985 response. "TAR" code of NEY: this is a private, non-sectarian school with ABET-accredited engineering programs and missing details for minorities and foreign nationals.

Program-Level Accreditation Codes:

These are used only in the tabulations for specific curricula:

--"B" denotes ABET accreditation for the program at the bachelor's level.

--"M" denotes ABET accreditation at the master's level (now only rarely used for programs with no B.S. equivalent).

--"A" denotes ABET accreditation at the associate degree level.

--"N" denotes programs with no ABET accreditation. In general, where program titles match across degree levels, higher-level offerings will be flagged with the corresponding lower-level code if such an ABET certification exists. However, many situations exist where this rule cannot be unambiguously applied. For example, we have generally labeled master's level programs in engineering mechanics as "N" for "no ABET accreditation" even when an ABET-approved BS curriculum in mechanical engineering is offered present. If an undergraduate program in engineering mechanics as such existed, then a "B" code would have been used for any corresponding higher-level program. In general, ABET does not attempt to accredit graduate programs, and codes at this level (other than the rare "M" designations) are meant only to denote the existence in an institution of an ABET-approved undergraduate course with an identical designation. This approach has been used for years in EMC educational surveys; however, it is possible that it will be changed as a result of the ongoing review of these projects described above.

Engineering Technology Discipline Category Abbreviations:

AER = Aeronautics and Related
ACN = Air Conditioning/Refrigeration/Heating
ARC = Architectural
AUT = Automotive
CHE = Chemical
CVL = Civil
CMP = Computer
CON = Construction
DRF = Drafting and Design
ELC = Electrical
ELM = Electromechanical
ELX = Electronic
ENS = Engineering Science
GNL = General Engineering Technology; includes Pre-Engineering Technology
INM = Industrial/Manufacturing/Engineering Management
MAR = Marine
MTL = Materials
MEC = Mechanical
MGN = Mining/Metallurgical/Welding
NUC = Nuclear
OTH = Others, including Biomedical, Agricultural, Ceramic, Environmental, Petroleum, and Systems
PRE = Students in specific 3/2 or similar pre-engineering programs

MISCELLANEOUS NOTES

All "3-2" programs or other pre-engineering curricula are treated as technology courses. The Commission is questioning this practice and is likely to revise it. EMC covers only a small fraction of these courses in its surveys; it is possible that pre-engineering will be dropped altogether, because to track it accurately would require the Commission to add hundreds of schools to its studies.

The following institutional name changes are reflected in the 1986 survey: University of Santa Clara to Santa Clara University; Southern Technical Institute to Southern College of Technology; Northeastern Oklahoma State University to Northeastern State University. The name of the Capitol Institute of Technology has *not* been changed in this report to Capitol College because that shift was not effective until the 1987-88 academic year.

RECENT AND UPCOMING ENGINEERING MANPOWER COMMISSION PUBLICATIONS

ENGINEERS' SALARIES: SPECIAL INDUSTRY REPORT 1987

A detailed breakdown of engineering salaries according to type of industry, geographic regions, company size, employee experience, highest degree held, and supervisory status. Tables and graphs depict salaries in medians, quartiles, deciles and means.

member price: $140.00 non-member price: $230.00

PROFESSIONAL INCOME OF ENGINEERS 1987

An abridged version of the *Special Industry Report.* Details for salary differences by highest degree held are not included; tabulations are added on engineering compensation in local, state and federal government agencies.

member price: $47.50 non-member price: $77.50

SALARIES OF ENGINEERS IN EDUCATION 1986

Median, quartile, decile and mean salaries across 18 experience brackets for engineering faculty, by academic rank, contract types, and type of institution.

member price: $50.00 non-member price: $80.00

ENGINEERING AND TECHNOLOGY ENROLLMENTS, FALL 1986

A two-volume overview of the enrollment of students in engineering and engineering technology programs throughout the United States. Details by fields of study for specific schools and states, with added tabulations for women, minorities, and foreign nationals.

Complete set: member price: $120.00 non-member price: $195.00

Separate volumes:

Part I: Engineering Enrollments: member price: $70.00 non-member price: $115.00

Part II: Technology Enrollments: member price: $70.00 non-member price: $115.00

ENGINEERING AND TECHNOLOGY DEGREES, 1986

A comprehensive report on recent engineering and engineering technology degrees in three volumes. Part I provides general statistics for schools and states on degrees in 40 engineering and technology disciplines. Part II provides similar data for awards to women, minorities, and foreign nationals. Part III includes detailed data for specific curricula.

Complete Set: member price: $140.00 non-member price: $230.00

Separate volumes:

Part I: by School: member price: $55.00 non-member price: $89.00

Part II: Minorities: member price: $75.00 non-member price: $115.00

Part III: by Curriculum: member price: $55.00 non-member price: $89.00

ENGINEERING MANPOWER BULLETINS

Concise, timely information on trends in engineering salaries, enrollments, degrees, women and minorities in engineering, other topics.

Full subscription year: member price: $47.00 non-member price: $75.00

Single copies: member price: $9.00 non-member price: $12.00

TO ORDER: Member prices are available to members of AAES member societies, employees of Industry Affiliates, and firms/educational institutions that have participated in the study to be purchased. Please include society affiliation and membership number, Industry Affiliate, or survey participant information with your order, if applicable. First class postage (U.S. domestic) is included in the purchase price. Foreign orders add 10%; check must be payable in U.S. funds. Prepayment required; pro forma invoices provided on request. Orders should be directed to the AAES Publications Department, 415 Second St. NE, Washington, D.C. 20002.
